Fresh Again for Athletic Wear Shoes

Product Description

Odors concentrated in the enclosed environment of a shoe or boot, foot perspiration can create personal embarrassment, make lockers and closets unpleasant, and cause expensive equipment to stiffen and rot. Fresh Again® for Athletic Wear and Shoes neutralizes the perspiration itself, even in porous material and foam!

How does Fresh Again® work?

Fresh Again® deodorant sprays convert gaseous odor molecules into a solid. No gas = no odor! This process is much more complicated than the desensitizing, physical masking or digesting action of other deodorants. The result of this gas-to-solid conversion is also more desirable ~ no offensive odor whatsoever ~ instantly! Application of Fresh Again® eliminates the production of more odor-causing molecules by inhibiting bacterial enzymes.

DIRECTIONS:

Apply Fresh Again® to the area which has been in contact with perspiration. For shoes, turn upside down and then spray deep into the shoe ~ spray liners out of the shoe for best results. Spray all other areas until evenly damp. Within a few moments, perspiration odor will be gone! If odor is still present, re-apply. If Fresh Again® is present, the treated item will remain odor free, even during repeated use.

Regular use of Fresh Again® for Athletic Wear and Shoes prevents the hardening and rotting damage caused by perspiration to fabrics, stitching, foams and leather. Use before wearing or before storage.

Fresh Again® for Athletic Wear and Shoes eliminates odors from footwear, leather gloves, helmets, skates, protective pads, inner lining material and much more!
